

Logistics & Material Management

+ Eliminate Wait Time Through Integrated Logistics

Executive Summary

Industrial projects lose thousands of hours daily to wait time. Workers waiting for materials. Crews waiting for buses. Equipment sitting idle. OnPoint's Logistics & Material Management solution integrates site logistics planning, TrackPoint real-time tracking, professional transportation, and seamless coordination with safety and project execution to ensure people, materials, and equipment arrive exactly when and where they're needed.

The Integration Advantage

Most companies contract logistics, materials management, and workforce transportation as separate services from different vendors. Materials arrive but workers can't access the work area. Buses run on fixed schedules that don't match shift changes. Safety permits delay work but materials were already delivered.

OnPoint integrates logistics across your entire operation where:

- Materials delivery schedules align with permit cycles and work windows so materials arrive exactly when crews are cleared to work
- Transportation coordinates with project schedules and shift changes eliminating delays from workers arriving late or leaving early
- Equipment staging accounts for safety clearances and emergency access preventing last-minute moves that delay critical path work
- Site logistics planning integrates with safety and execution teams during pre-project planning to prevent congestion before mobilization

Result

No gaps between logistics and execution. No delays from miscommunication. No waiting for coordination across multiple vendors.

Strategic Business Outcomes

Eliminate Productivity-Killing Wait Time

Five minutes here. Eight minutes there. Manpower-intensive jobs lose up to 12,000 hours of productivity daily from workers waiting for materials, transportation, or equipment. TrackPoint real-time tracking provides visibility into materials location and forward-looking capabilities identify what's needed before crews request it. Professional transportation eliminates travel time and ensures on-time shift starts.

Reduce Total Project Logistics Costs

Integrated logistics eliminates redundant costs from managing multiple vendors. Optimized site layouts reduce transportation distances and fuel costs. TrackPoint inventory management prevents over-ordering and material loss. Coordinated equipment rentals minimize idle time and wasted rental fees. Proven \$2.1M savings on major projects.

Accelerate Project Execution

When materials, transportation, and logistics coordinate seamlessly with project execution and safety, work progresses without artificial delays. Materials stage ahead of work windows. Workers arrive on time. Equipment is positioned and ready. The result is faster project completion without adding manpower or extending hours.

Industries We Serve

Energy & Utilities

Refineries, petrochemical plants, power generation, pulp & paper mills

Manufacturing & Materials

Steel production, automotive assembly, pharmaceutical manufacturing

High-Tech Infrastructure

Data centers, semiconductor fabs, large-scale construction projects

Construction

General contractors, specialty contractors

OnPoint.

Ready to **eliminate** wait time?

Schedule a comprehensive logistics assessment. We'll evaluate your operations and identify opportunities to eliminate wait time and reduce total logistics costs.
